

Monitor the output of 4-20mA transducer

The 4-20mA Interface allows you to connect a 4-20mA transducer to your Sensaphone IMS unit. The 4-20mA Interface features optical isolation between the input and the IMS unit, which ensures trouble-free operation and safety. The electrical connection between the bridge and IMS is made via RJ-45 patch cable (not included). The bridge may be mounted either on a wall or rest on the floor..
